

Glazed Brick Care and Maintenance

Initial Cleaning

1. Remove excess mortar using a wooden paddle followed by a clean, damp sponge. Avoid using metal tools and metal brushes on the glazed brick surface.
2. Towel dry to polish the surface with a clean terry cloth towel.
3. Follow the mortar manufacturer's recommendations for proper cleaning of mortar residue.
4. If necessary, a commercial brick cleaning agent can be used, following the manufacturer's instructions.
5. Our Glazed Thin Brick does not require waxing. If power washing is necessary, a standard 2500 PSI power washer can be used without chemicals.

Daily Cleaning

1. Glazed brick can be cleaned daily using a damp sponge and a neutral detergent cleaner. Rinse and dry thoroughly.
2. Commercial bathroom cleaners and a white nylon scrub pad can be used for more stubborn stains.
3. Marker stains can be removed using denatured alcohol (ethanol). Spray paint can be removed using paint thinner. Always follow the manufacturer's instructions and precautions.
4.
 - Do not use any agents that contain dyes or colors.
 - Do not use abrasive, oil based or wax materials.
 - Sealers are not recommended for this glazed brick.
 - Always test cleaners in a small area prior to larger application.

Our glazed brick is designed and produced to be nearly maintenance-free and should not require an extensive cleaning protocol.
